Effective bird control in an animal-friendly way

Create a bird-free zone with animal-friendly, electromagnetic waves and keep the animals away from your property, roof or building

**BirdOff** is a new product from Ketrop, a leading company in bird and game repellent products. The design was mainly aimed at the nuisance caused by pigeons, although it later turned out that the system is also effective against other bird species.

Both in science and among bird controllers in practice, it is commonly known that pigeons need a safe landing place. Once they have found it, they orient themselves further from there to see whether that place is suitable for building a nest and finding food in the area. An explosive growth of the population causes a nuisance and sometimes even a plague. The presence of food (residues) is often the source of the plague.

Over the years, various bird-repellent methods have been developed, but their success often depends on several factors and is sometimes visually less attractive. For that reason, Ketrop is constantly looking to improve and innovate its range. In that respect, **BirdOff** is a revelation because the system works with electromagnetic waves. These waves disturb the organic compass of pigeons and a number of other species of birds, especially migratory species. The inverted north-south poles of the **BirdOff** cause confusion and the bird flees to a more comfortable area where its navigation is not disturbed.

The **BirdOff** is a handy device that ensures that the birds do not suffer any pain, because they do not want to land in advance. The targeted installation of a **BirdOff** system ensures that not only landing is prevented, but also nesting and the associated disadvantages such as contamination by faeces and noise pollution.

## The system is extremely suitable for bird control at:

- Business parks, offices, factories, distribution centres, retail properties
- Apartment complexes, hotels, restaurants, museums, government buildings
- Sports complexes, clubhouses
- Agriculture and livestock
- Airports, ports, transport, construction companies, energy companies

Recommended against countless bird species!

## Nuisance caused by birds

It does not take many nesting birds to cause a nuisance. The amount of droppings is feared and causes damage to public and private property. Due to the high acidity of the excrements, damage to car paint, scorch marks on the lawn, damage to gutters, overhangs, sidewalks, walls, fences, windows, garden plants, ponds, technical installations, decorations, etc. quickly occurs. There is also additional waste such as eggshells and feathers. Cleaning is time-consuming, inconvenient and costly.

Doing nothing is not an option because not only the (dried up) faeces, but also skin scales and feathers can contain bacteria that can cause diseases in humans and animals, especially in the respiratory tract and all kinds of allergic reactions.

Pigeons and seagulls sometimes carry various parasites. Dangerous diseases such as psittacosis (parrot fever), salmonella and cryptococcosis can be transmitted as a result. When the birds leave their nests, the parasites remain in the nest. They can cause nuisance to people. An example of this is pigeon mites that cause itching, redness and swelling of the skin.

Also noise nuisance is caused by cooing birds and who doesn't recognize the irritating sound of tripping pigeon toes in your gutter?

**BirdOff** is not only effective against pigeons. Seagulls, crows, starlings, sparrows, woodpeckers and various species of migratory birds are also sensitive to electromagnetic waves.

## Installation

Installing a **BirdOff** system is usually not for private individuals, but for skilled installation companies, who have knowledge of electricity as well as experience with working on roofs and other uncomfortable and risky locations.

Ketrop already has a network of reliable installers. Our installers are trained in the installation of the **BirdOff** and are also provided with an extensive installation manual. New installers who want to participate in this are welcome and we are happy to make an appointment with them.

For installers who already work in the field of bird control and want to expand their range, **BirdOff** is also a very interesting product.
